

A Simple Math Solution for Unfinished Learning

Anytime, anywhere supplemental math practice with Imagine Math®

Imagine Math's **Amplified Review Pathways** were carefully designed to solve for any learning deficiencies resulting from unforeseen disruptions in instruction. With Amplified Review Pathways, you can:

- Address major work from the previous grade alongside the standards students still need to learn and master.
- Cover rigorous, standards-aligned content with intentional scaffolds to ensure grade-level success.
- Empower students to master grade level content in the new academic year, regardless of how much learning loss they experienced.

How Amplified Review Pathways Work

1. Assign Amplified Review Pathways to all or some students
2. Students take Benchmark Assessment to determine their personalized grade-level learning path
3. Students are automatically assigned 10–12 key content lessons from the previous grade, regardless of Benchmark results
4. Students test out of both review and grade-level lessons by passing the Pre-Quiz
